Lauro Pimentel

PYTHON DEVELOPER

Career Objective

As a systems analysis and development major at one of Brazil's top universities, my dream career since before I entered high school has been to pursue a **Python Developer** role. In 2016, I began my journey in web development as a competitor in the Brazilian Computer Olympics challenge. Now, I work as as a Python Developer using Django and am seeking new opportunities. Raised for several years in the U.S. and with a record of stellar contribution working remotely, I am well equipped to implement a client's next concept into an active solution.

Employment History

Software Developer, Peppertools.com.br, Hybrid

JULY 2018 — PRESENT

Fixed computers and wrote g-code to increase tool production.

Used three management systems: one with object-oriented PHP, another with Python using flask framework and an object-relational mapping library, and the final transitioned with Django due to scalability issues.
